

# BLUE MARKINGS ON YOUR LAWN

The blue markings on your lawn are part of the Water Departments effort to document all water service shutoff (curb box) locations on your property. The documenting of the location of your shutoff is the first part of our required compliance with the EPA Revised Lead and Copper Rule. The Town must document all water service in our distribution system and physically determine the plumbing materials in use at your home or business. This will require your cooperation and help to identify the plumbing material coming into your home i.e. copper, lead, galvanized or plastic. A questionnaire will be going out in the near future explaining the information the Water Department needs from you to help and document the materials in your home. After the Water Department gathers as much remote information as possible, then selected water services will be investigated to determine if there's a confirmed lead service before and after the water shutoff in your yard. Any lead services that are found will be entered into a database and will be scheduled for removal in the future.
